In the past six months approximately how many times have you experienced an instance of a large upswing in the acquisition price of a generic drug?

![Percent Frequency Upswing in Price](chart)

In those situations in which you have experienced a dramatic upswing in the acquisition price of a generic drug, on average, how long did it take the PBMs or other third party payors to correspondingly update pharmacy reimbursement rates?

![How Long to Update Pharmacy Reimbursement Rates](chart)
Have you experienced generic acquisition price spikes for prescriptions dispensed to beneficiaries covered by Medicare Part D or Medicaid?

In your opinion, would transparency into the MAC setting process or requiring the PBMs/Third Party Payors to update prices to reflect current market conditions within a certain time frame help to alleviate this situation?
How significantly are these generic acquisition price spikes and the corresponding lag in reimbursement rates affecting your ability to provide patient care and remain in business?
